Lemongene Technology Limited

Lemongene is a startup company in Hong Kong focusing on upgrading local traditional industries with modern mobile technology. We are building a local online driving school connecting students and their private driving instructors by our Apps. We provide a personal mobile SaaS tool to driving instructors, in which they can arrange their schedule, broadcast course information, receive real-time booking, manage students and so on. Meanwhile, we provide students a learning tool, in which they can do written test review. Also, students can use our App to check instructor's schedule, enroll in a course online and so on. Strengthening the connection between students and instructors will make the entire industry more transparent and efficient.

Comparing with markets in US and Mainland China, use of mobile technology in Hong Kong are far behind. This means there are plenty of opportunities for mobile technology applications in Hong Kong. Mobile devices are very popular in Hong Kong. However, few applications based on mobile technology have been applied in traditional industries. Although it is very inconvenient, paper notes and pens are still being used in those industries as there are no mobile solutions available for them. Lemongene was founded to fill this gap by offering new mobile solutions to practitioners in those industries.

Lemongene is a team consists of young yet experienced members. All members are very nice to work with. We have dreams and passion for the future, and we are looking forward to meeting young people who share the same dreams with us.

Our previous portfolio can be viewed at: http://www.lemongene.com.

Our current ongoing project [學車王 DrivingKing] can be checked on App Store, Google Play and website: http://www.drivingking.hk.
