The details

Our venture

FinFabrik is a Financial Technology Solutions Builder based in Hong Kong, focused on capital markets tech. We develop platforms that our corporate clients use to bring investment services such as trading to their customers. FinFabrik builds the solutions for a FinServ future that will be digital and highly automated, focused on user experience.

The FinFabrik team is at the core of our journey - a diverse group of people propelled by curiosity, a drive to create and the enthusiasm to learn every day. Together, we think and debate, we work hard, we laugh a lot and celebrate success.

The product

Your work will be around one of our core products: BrokerFabrik (www.brokerfabrik.com) is a next-generation online platform that Financial Institutions use to offer trading services to their customers. Being already used by our first clients, it changes the way retail investors actively create, manage and balance their portfolio to improve their returns.

The platform is built from the ground up with state-of-the-art design principles, technologies and engineering practices. We want to offer our ultimate users an outstanding investment experience and powerful trading and portfolio management tools through the use of analytics, visualisation and actionable insights.

Your position and what you will add

We are looking for a self-driven junior full-stack engineer who can confidently work and be responsible for the development of our core platform from back to front. It is essential that you are capable of developing good quality and testable source code.

You will be a central and active part of a fast-paced, pragmatic and collaborative environment and a diverse group of people working in different setups and locations.

We expect from each other highest quality work, adaptive thinking, the ambition to have an impact, contrarian views and to boldly push into unknown territory while maintaining vision and responsibility.

Location

- Hong Kong - we love it here!
- If needed, we will help with sorting out visa requirements
- Our company offers flexible remote working arrangements after an initial phase of being on location to integrate with the team
- Our offices are on Hong Kong Island

Package

- Competitive package of salary and company equity
- Bonus program
- Perks like tuition and training reimbursement

Ideal skills and experience profile

- Bachelor degree in Computer Science, Software Engineering or equivalent experience
- 1-2 years practical experience preferred
- Experience in Java, Spring/Spring Boot, HTML5, JavaScript /Typescript, CSS, NodeJS
- Technical knowledge in databases, BDD/TDD
- Familiarity with OOP, unit testing and integration testing
- Familiarity with DevOps process (example: Git, Bamboo, etc)
- Experience developing under UNIX/Linux environment
- Understanding of Agile design and development process
- Fluent in English, both verbal and written, Asian language is an asset
- Self-motivated, can-do attitude and passionate about communicating ideas with team members
- Enthusiasm for learning and solving problems
- *Fresh graduates with related experience are welcome*

Why we think you should apply

- Change the future of Financial Services - and yes, it needs changing
- Do challenging and interesting engineering work
- Work with experienced professionals across banking, strategy and technology
- Join an open and informal, yet ambitious team that embraces differences in people
- Actively shape and help build a champion in a highly dynamic field and geography - we win together and share our success
- Develop new skills, learn from your colleagues as much as you teach them
- Enjoy an attractive package and location with a flexible work setup
