

## **Software Developer/ Software Engineer @10Life (InsurTech Company)**

We want to empower consumers to make well-informed insurance decision easily. 10Life is a well capitalised InsureTech Startup who launched an industry first mobile product in Q4 of 2016 with tens of thousands of users.

We provide a challenging technical environment for talented and motivated individuals who share our vision of transforming insurance practices across borders through seamless convergence of web and mobile technologies.

Office space centrally located near Times Square. Team of fun and young actuaries and executives from the Insurance industry who have quit their jobs to make insurance fun again!

How you will show your skill:

- Work with actuaries and data scientists to propose, implement and improve solutions
- Develop and maintain production system with good code quality and fully automatic testing
- Continuous learning the latest and greatest mobile technology and industry best practices
- Provide user behavior insight from analytic data

We are a good match if you are:

- Knowledgeable in one of the followings:  
Nodejs, iOS, Android, Ruby, Python
  - Fluent in spoken and written English and/or Cantonese
  - Willing to learn and explore
  - Experienced in data intensive system (optional)
- (More skilled candidate will be considered as department head)

What you will get:

- Performance review half-annually and developers with consistent high performance will be heavily rewarded
- Competitive salary and benefit packages
- Exposure to the latest software technologies and mentoring
- Flexible working environment with full stock pantry
- Young and energetic work environment

How to apply:

- Send CV with cover letter to [hr@10life.com](mailto:hr@10life.com)
