

Work for Hong Kong's Leading Bank

Graduates wanted in Hong Kong

We are looking for talented graduates to launch an exciting career with FDM where you will be trained in the world's leading financial trading and risk management software and proceed to work on assignments with our client, one of Hong Kong's top tier banks. The trade and risk management software is used by investment banks, amongst other industries, to trade instruments across the global financial markets and manage the risks associated with these trades.

Successful candidates will receive specialised training prior to working onsite with this leading bank. Training will fast track you to become specialist technology professionals in this leading software.

To apply, please send your CV to
Enquiries.HK@fdmgroup.com
for immediate consideration

The ideal FDMer has:

- Bachelor's degree
 - Eligibility to work in Hong Kong
 - Passion for technology and finance
 - Strong analytical ability and problem-solving skills
 - Good decision-making skills within fast-paced environments
 - Excellent communication skills and an ability to build relationships
 - Ambition, with a drive to succeed within the digital and banking / finance sector
- The ability to commit to a two-year contract with FDM upon completion of the training period

Alistair Rutherford

Global Murex Specialist

“ I first started as a trainee 17 years ago in our Brighton Centre and I was deployed across The Hague, Paris and London. When I came to the end of my contract with FDM, I decided to join the academy as a senior trainer and project manager and I went on to become the Academy Manager. I then moved from fulltime training into the business becoming a Technical Support Officer supporting FDM consultants in the field and the Account Managers in client engagements. After moving into the application and production side of the business, I became MX.3 validated and began training Murex consultants.

In terms of career streams here at FDM, Murex creates a great challenge in bringing into all the elements of what it means to provide a ITSM service with the financial sector as it covers financial business aspect of the trade lifecycle along with the mathematical models used as well as the functional & technical configuration aspect of the MX platform.

Our partnership with Murex ensures we are training on the current versions of the MX.3 platform and the continuous updating of the training program they make available to us creates a more robust program delivering great new talent to your mutual clients. ”

Joel Loh

FDM Consultant, Murex Application Analyst, Singapore

“ The best thing about working with Murex is that I have been able to learn the whole investment banking process from front office to back office, and that is going to be incredibly useful to me no matter where I decide to go next in the banking industry.

I first came across Murex after completing my Bachelor's degree in Computing and joining the FDM programme. After completing the course, I was placed with a client as a Murex Application Analyst. In this role, I learnt how to manage Murex, the bank's core training platform. It is my responsibility to ensure that the application is always functional throughout the year, 24/7. I have also been fortunate enough to participate in a number of big projects that are working towards improving the organisation for the future. I am glad to have been a part of the journey and as they say, the best dreams are those that come alive. But in chasing dreams, let's not only focus on improving the standard of living, such that we forget to improve the standard of our lives. ”
